Next Generation Data Centers and Energy Management Systems

Lecture 11A: Modeling and Simulation of an Energy Management System

Prof. Thomas M. Schutzius

Department of Mechanical Engineering

Fall 2026

Berkeley
UNIVERSITY OF CALIFORNIA

Learning Plan

- Introduction to Data Center Systems and Thermodynamics
- Psychrometrics and Heat Transfer
- Performance Metrics and Standards
- Applied Computational Fluid Dynamics (CFD)
- Liquid Cooling & Advanced Heat Transfer
- Chip Cooling: Heat Conduction and Thermal Interface Materials
- Power Delivery and Infrastructure (Energy sources: Geothermal, Solar, Nuclear, etc.)
- Overview of Simulation Field; the Concept of a Digital Twin
- Machine Learning and Optimization Tools
- **Modeling and Simulation of an Energy Management System**
- **Control Systems and Optimization**
- Spacecraft Thermal Control
- Final Project Work, Peer Feedback, and Mentor Check-in
- Symposium

Learning Objectives

- Discuss expectations for the final project; please submit your concept by tomorrow here (Please submit a short description of the project (300 words maximum)).
- Apply classical control, model predictive control, and reinforcement learning to a cooling distribution unit.

Typical layout of a data center facility

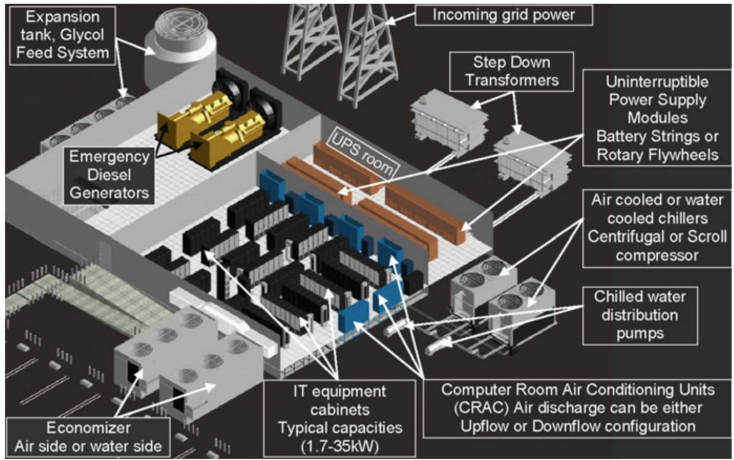

Figure 1: (Figure 1.1 in Ref. [1]).

Seminar 9

- Bryson Borzini
- Title: Building Next-Generation Data Centers: A Mechanical Contractor’s Perspective
- Date: November 17, 2026
- Time: 15:30 (Berkeley Time)
- Location: GSPP 150

Modeling and Predictive Control of a Rack CDU

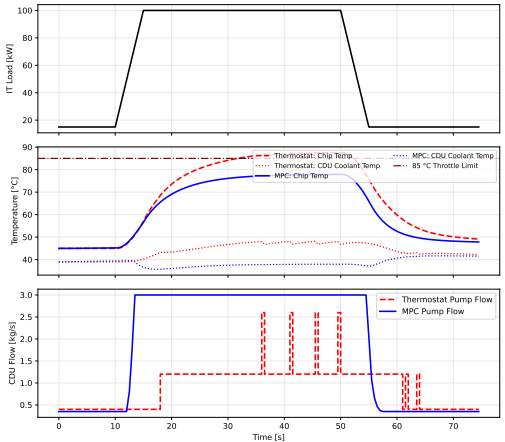

Figure 2: CDU thermal management during an idle to full-throttle process.

Reinforcement Learning Control of a Rack CDU

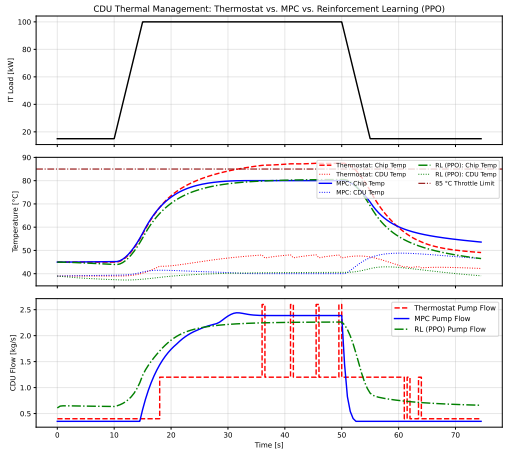

Figure 3: CDU thermal management during an idle to full-throttle process.
